

Hello,

My Name is Marco Carvalho and I'm currently a senior at Florida State University majoring in IT with a focus in security and networking. I will be graduating in August.

I'm currently 1 of 8 students in the advanced security class in the IT program where we work on labs that involve using IDSs, port scanners, and vulnerability scanners. I also have contributed to an 11 page (10,000+ words) group lab report on the common vulnerabilities on a php website where we did penetration testing on a premade website and I have also just completed another group paper (15 pages) on ARP poison and DDoS attacks. In this project we set up a pfsense firewall, honeybot, and used a kali linux virtual machine to attack our other classmates. I also have basic knowledge databases (sql and access) and programming languages such as java and python (currently learning html). I also have experience with teaching elementary schools the basics and the process of coming up with entrepreneurial ideas. You can see some of my papers at marco0811.github.io

I would enjoy the opportunity to further discuss the open position (or related positions) and my relevant experience. I'm very interested and ready to get experience in the field. You can contact me through email (marcocarvalho0811@gmail.com) or phone ([9417358766](tel:9417358766)).

Sincerely,
Marco Carvalho
